

15 puncte

BAREM

(a) Cazuri posibile: 1) MgO si MgCl₂; 2) TiO₂ si TiCl₄

(b) TiO₂ si TiCl₄ (lichid la temperatura camerei)

TiCl₄: compus molecular (structura tetraedrica) cu molecule nepolare.

(c) ZrCl₄. Structura polimera monodimensională, prin urmare, compus solid.

Oricare din cele doua formulari va fi punctata (corecta este insa formularea A)

Ti(III): d¹; culoarea este datorata tranzitiilor d-d.

Din solutie apoasa cristalizeaza compusii [Ti(H₂O)₆]Cl₃; [Ti(H₂O)₄Cl₂]Cl·2H₂O (izomerie de hidratare). Este considerat raspuns corect si [Ti(H₂O)₅Cl]Cl₂·H₂O.

Se distila tetraclorura de titan, pentru purificare, apoi se refaca dioxidul de titan:
